Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition. Grant Writing Tips for Nurses is a reader-friendly primer that acknowledges that grant writing is an essential skill for today's nurse. The text follows a logical path, moving from the reasons for seeking grant funding, the types of grants available, and the structure and content for a typical grant proposal, to the transit of grant proposals through internal institutional processes, deadlines and signatures, and progress through review by the funding agency. Final chapters take a glance forward to future funding, ethical dilemmas related to grants, and life after grants. An Essential Resource for Your Course!

This book has been updated and revised into a comprehensive Second Edition that logically provides a foundation for understanding the bio-physiological effects of physical agents and their impact on an individual's occupational performance and functioning. This second edition provides the occupational therapist and student with a user-friendly and organized reference on the application of physical agent modalities, commonly used by occupational therapists, as well as emerging technologies and interventions such as lasers and electromyographic biofeedback. It also outlines the application procedures for each modality, indications for their use, and the precautions and contraindications of the modality. New graphics and pictures enhance the reader's understanding of the physical agents, while case studies facilitate clinical reasoning and provide a practical resource to safely and effectively understand and use physical agents.

**Physical Agents in Rehabilitation** F.A. Davis

"Entry-level occupational therapists are expected to have fundamental skills in splinting theory, design, and fabrication. As occupational therapy students, they gain these skills through didactic courses, fieldwork, or observations. Orthotic Intervention of the Hand and Upper Extremity: Splinting Principles and Process, Second Edition, delivers just that. Instructors need materials to teach students how to apply theory to practice in the area of splinting. This book provides instructors with the pedagogical framework necessary to help students, inexperienced therapists, and expert hand therapists make the right decision whether to fabricate a thermoplastic or neoprene splint, cast, tape, or choose an over-the-counter splint for their patient. This detailed and easy-to-use reference demonstrates splint fabrication techniques and related interventions for the upper extremity and highlights anatomical and biomechanical principles specifically related to splints"--Provided by publisher.

President Eisenhower, who was not always the best student, once wrote, "One cannot always read a man's future in the record of his younger days." Indeed, this review of the classroom experiences of presidents and first ladies from George and Martha Washington to Barack and Michelle Obama reveals that few made model students. Teachers reported that John F. Kennedy could "seldom locate his possessions," found George H.W. Bush "somewhat eccentric," and dubbed a sixth-grade Bill Clinton "a motormouth." In addition to chronicling the school days of these historic figures, this volume also relates their teaching experiences, the educational issues they addressed during their White House years, and intricacies of education at their time in history, providing an informative overview of American schooling over time.
